Subject: ridiculous fcc regulations concerning Ground Penetrating Radar

---

It seems that in their zeal to accommodate big business concerns, the FCC has lumped Ground Penetrating Radar (GPR) with the intrusive "through the wall" imaging systems, and is attempting to regulate the GPR equipment I use to make a living and to pay taxes.

This is so simple it is absurd. One example: The FCC is concerned that GPR will interfere with Global Positioning Satellite (GPS) systems, yet GPS is routinely used in conjunction with GPR.

The emissions from GPR are so negligible that I'll bet I could operate the unit 10 feet away from the FCC's detection equipment, and they would never have a clue.

Let's regulate the industries that need regulating, and let's not waste time and money on ultra conservative regulations that benefit no one and harm an entire industry.
